

Choice of model

Cassette 32 is available in 2 options:

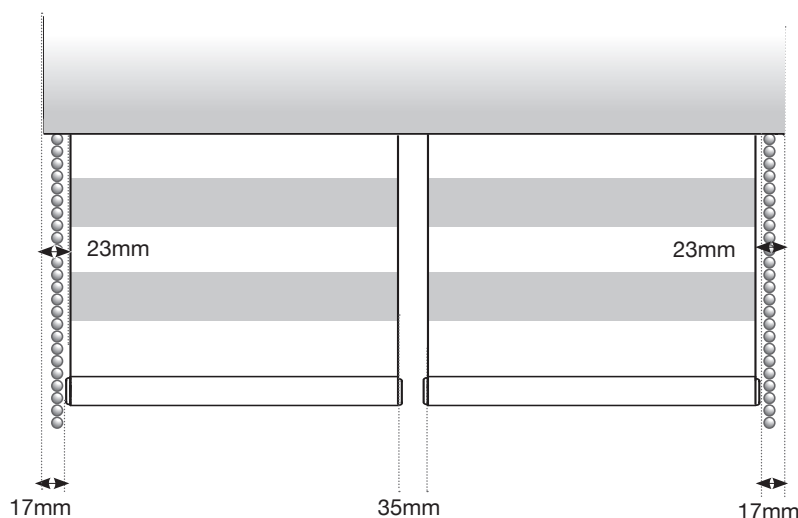

- A.** Front rolled . Ideal when face fixing in recessed windows with protruding handles.
- B.** Back rolled. Ideal when face fixing to walls in front of recessed windows.

Be sure to choose when ordering!

Back Rolled or Front Rolled

2 Blinds

Panel Alignment Option (important)

When Duplex blinds are fully drawn, the transparent fabric is overlapped by the non-transparent fabric maintaining privacy in the closed position.

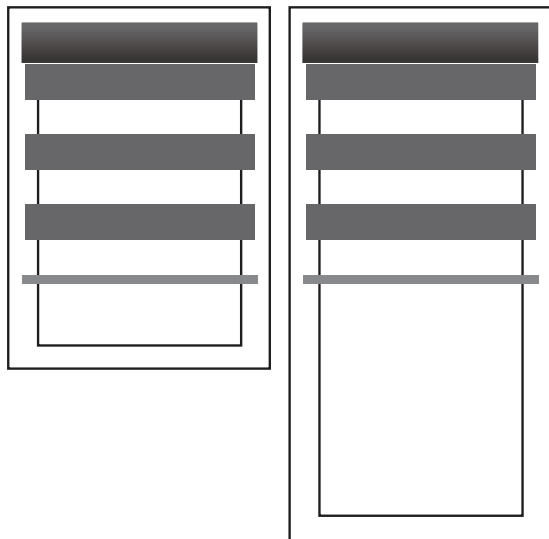

If you wish the panels to line up (recommended when next to each other) than better to order the smallest drop on all blinds e.g. for bay windows.

If this is not possible e.g. for French doors with 2 smaller windows either side, than select the panel alignment option stating which blinds are to be aligned together.

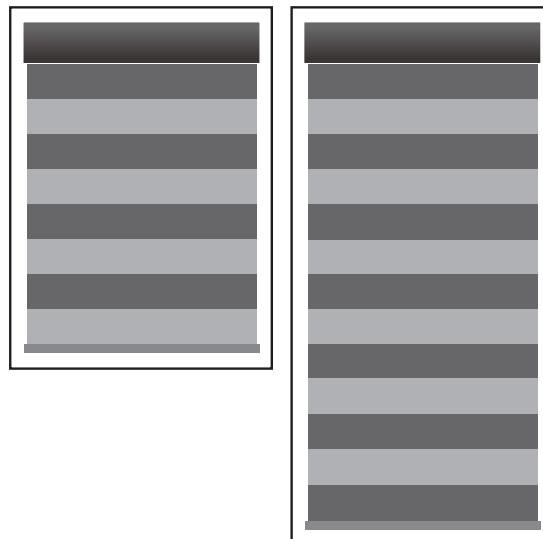

Please notify us which is the priority blind (as the drop may be critical on one of them) and we will align panels on all the blinds to match that one. Beware that the other blinds at different lengths will not be the exact drop in the closed position As the exact panel alignment option has prevented this. (Normally the drop on doors is not as critical as on windows due to doors having larger frames) The closed position will always be higher than the drop requested on the non-essential blinds (up to 30mm).

Aligned Panels (Drops can not be made exact* on more than 1 blind (the priority blind))

Half Open

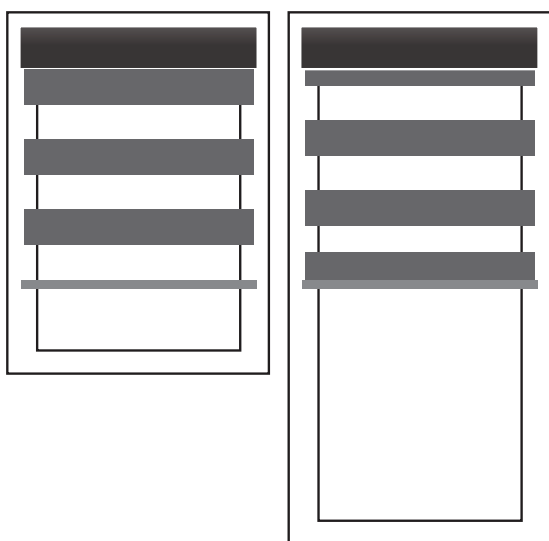

Fully Drawn

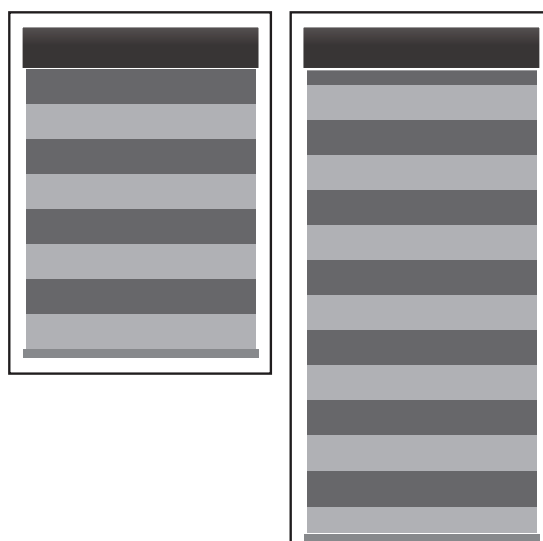

Non Aligned Panels (Drops can be made exact* on all blinds but panels will not be lined up)

Half Open

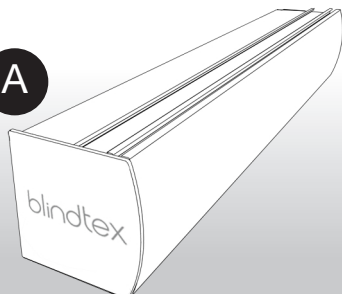

Fully Drawn

Warning

- If Panel alignment option is not selected then the panels of different length blinds will not form a continuous line.
- We will not accept responsibility for failure to mention any options on ordering.
- Always best to use our order form
- Exact means within our 5mm tolerance.

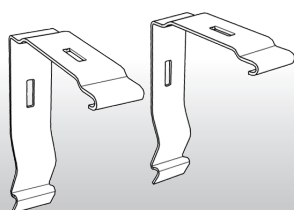

A

Evo Cassette 32®

Cassette system, allows quick and easy mounting in either top fix or face position. Our patented design allows for reverse rolling and covering with matching or contrasting fabric.

C

Cassette Mounting Brackets®

Mounting brackets allow for near invisible fixing of the cassette. Top or face fix using the same bracket. Once fitted the cassette simply snaps into position.

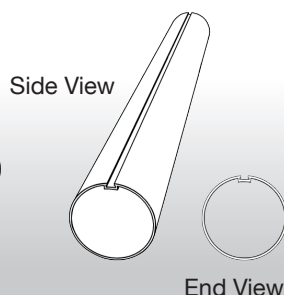

M

Chain with Child Safety

Available in nickel plated brass or plastic. The pitch of the operating chain is designed to provide a smooth operation.

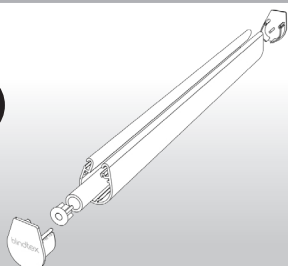

F

32mm Tube

The design allows for full integration of the selected fabric and also provides maximum resistance to tube deflection.

G

Evo Bottom Bar & End Caps®

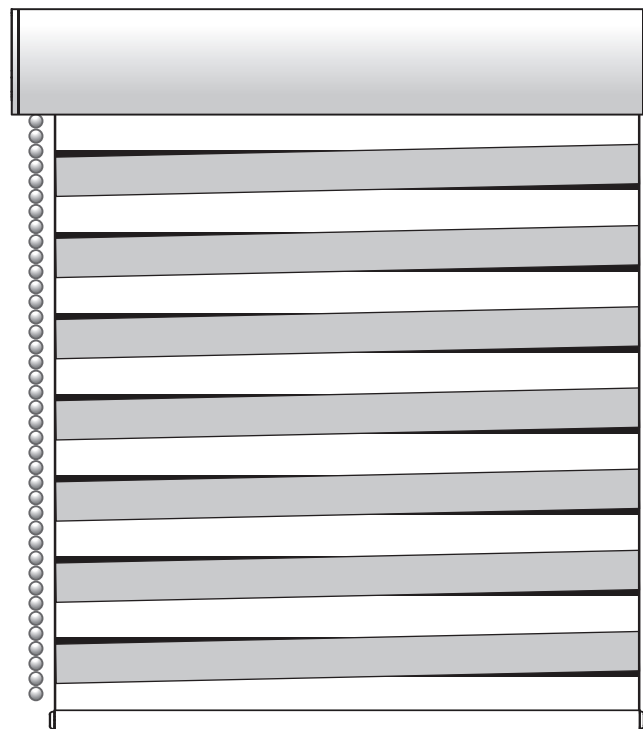

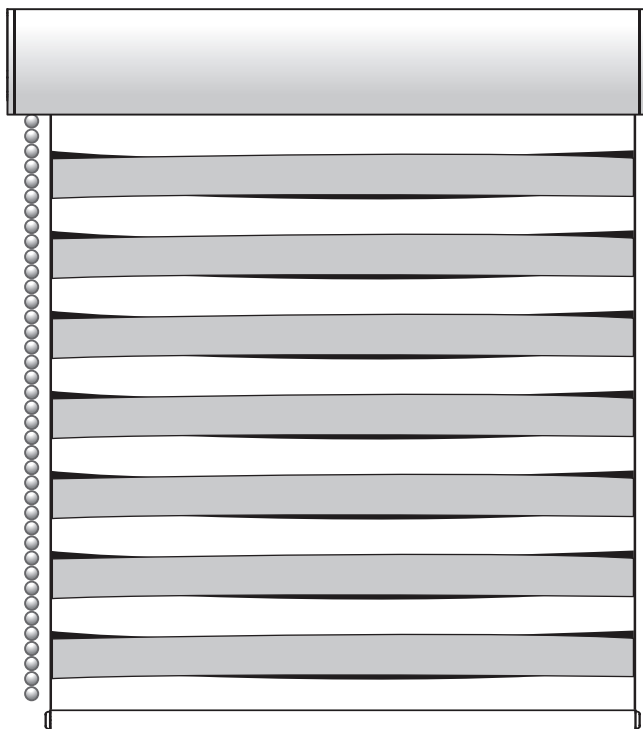

Available covered in matching and contrasting fabric or uncovered in white, Piano Black, Light Gold, Copper, & Silver.

Measuring

Blind size: will be width of the cassette by top of bracket to bottom of bottom bar (in closed position).

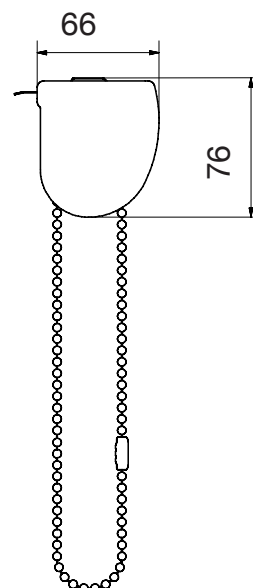

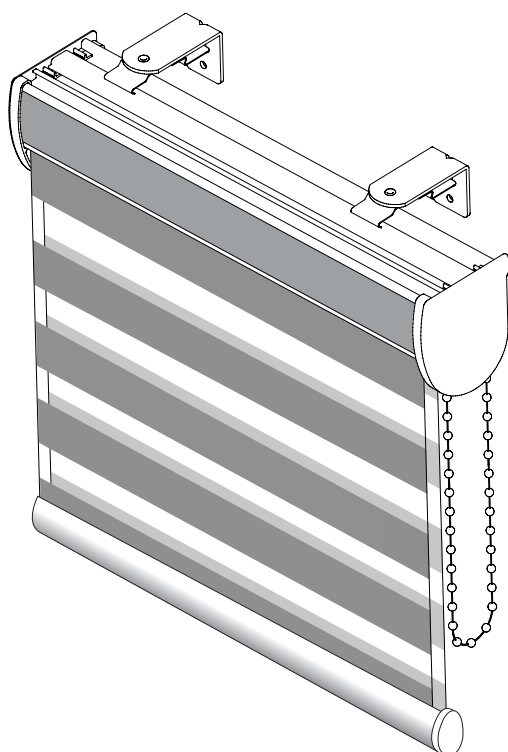

Recess size: will be - 10mm from both width & drop.
Tolerances: 3mm on width and drop.

Alignment Tolerance

1- Bow & skew tolerance 3mm per linear meter.

Hybrid cassette

Cassette Options

The cassette default in most options is covered, when covered we prefer to use the coordinated colours below.

Feel free to mix and match the colour of your choice for the cassette from the list below, at no additional charge. Or for a surcharge use any of our roller, Sheer horizon or duplex fabrics.

If matching fabric is selected we will need to sew 3 panels together as the panel height is less than the cassette height, the result will be 2 stitch lines across the width of the cassette.
